Work Experience

HackerOne

June 2025 – Present

Mediation Specialist III

Pune, India

- Developed and created various internal tools for different teams, leveraging AI and other available tools to improve workflows and increase productivity.
- Developed scripts and automation to track user/customer messages and tags, streamlining communication and ensuring smooth update tracking.
- Partnered with bug bounty hunters and program teams to improve vulnerability assessment accuracy, ensuring correct CVSS scoring, real-world impact categorization, and clear communication of high-risk scenarios.
- Collaborate with bug bounty hunters and program teams to align on vulnerability impact, resolve conflicts, and guarantee accurate rewards for valid findings.

Astra Security

Apr 2023 – June 2025

Information Security Analyst

Kolkata, India

- Conducted **400+** penetration testing engagements across web applications, APIs, networks, and cloud environments, uncovering over **500** critical vulnerabilities and providing comprehensive reports with risk-based prioritization and remediation strategies tailored to each client's technical constraints and business context.
- Worked in close partnership with clients to address identified vulnerabilities, resulting in enhanced security for their systems and software.
- Built custom automation tools and web applications to address operational inefficiencies, including report generation utilities for client-specific formats, fallback scripts for edge-case scenarios where standard tools failed, and end-to-end workflow automation pipelines that integrated multiple security tools (Nmap, Masscan, service-specific scanners) to streamline vulnerability discovery and reporting.
- Built a full-fledged AWS scanner and management dashboard leveraging **300+** rules to automate security testing, enabling the team to focus on manual assessments and simplifying AWS project testing.
- Partnered with leadership as the technical contributor to achieve PCI ASV (Approved Scanning Vendor) certification for the organization, coordinating compliant vulnerability assessments and reporting processes that met rigorous PCI Security Standards Council requirements.

Certificates

Certified Penetration Testing Specialist (CPTS)	Sept 2026
Offensive Security Certified Professional (OSCP)	2024
Certified Ethical Hacker (CEH) v12	Sept 2022
Oracle Cloud Infrastructure Foundations Associate	Aug 2023

Technical Skills

- **Security Testing:** Web Application Penetration Testing, Network Penetration Testing (Active Directory), API Penetration Testing, Mobile Application Penetration Testing (Android/iOS), AWS Configuration Review
- **Programming Languages:** Python, JavaScript, SQL, Bash
- **Frameworks & Technologies:** Flask, Django, Node.js, Express, Tailwind CSS
- **Cloud & DevOps:** Linux, AWS, Docker, Github Actions, Jenkins, Kubernetes

Projects

Vulnerability Scanner Chowkidar | *Python, Flask, Docker, Redis, SQL,*

2024

- Chowkidar is a standalone platform designed for security researchers and developers to efficiently scan their web applications and AWS environments. It simplifies vulnerability detection through an intuitive interface, allowing users to initiate, monitor, and stop scans with ease.
- The scanner incorporates over **300+** rules to detect security misconfigurations and vulnerabilities. It generates a comprehensive PDF report and provides updates via email notifications.

Jack - AI Chatbot Plugin | *JavaScript, Mongodb, Chat GPT*

2023

- This is a browser extension that provides a powerful AI chatbot to talk to. It leverages the OpenAI's Chat API (gpt3.5-turbo) and answers questions related to the site that you are currently at.
- The extension retains a history of interactions and leverages this information to deliver responses that are relevant and aligned with the established context. This ensures more accurate and tailored communication.

Digispark Scripts | C++, Arduino, Rubber Ducky

2023

- The objective of this project was to generate diverse scripts for Digispark, an Arduino microprocessor characterized by a USB Type-A input.
- Utilized this code to make it function akin to a Rubber Ducky. Upon insertion into a computer, it would identify itself as a keyboard and carry out the designated keystrokes as instructed.

Other Achievements

Guest Speaker

2021 - 2023

- Guest Speaker for a **Walt Disney (Singapore)** workshop (Dec 2021) — Led a session on cyber awareness and security best practices for employees.
- Guest Speaker at **VIT Bhopal** (Mar 2023) — Spoke on cybersecurity's future, guided final-year students through career paths and placement preparation
- Guest Speaker at **Shah & Anchor Kutchhi Engineering College** (Jan 2022) — Delivered a workshop to raise cyber awareness among students and shared insights into current cybersecurity challenges.

CTF Organizer at siNUoid v5, NIIT University

2023

- Organized and hosted the Capture the Flag (CTF) event for NIIT University's Tech Fest siNUoid v5.
- Deployed self-hosted CTFd instance and created comprehensive challenge set covering web, crypto, forensics, and reverse engineering categories for **500+** participants across **30** colleges.
- Designed and managed cybersecurity challenges, giving participants hands-on experience with real-world attack and defense scenarios.

Write Blogs

2024

- Write and publish technical blogs focused on cybersecurity, simplifying complex vulnerabilities and attack vectors for a wider audience.
- Contribute educational content on security, vulnerability exploitation, and defense strategies to help the security community learn and grow.

Education

NIIT University

June 2020 – June 2024

B.Tech in Computer Science Engineering with specialization in Cybersecurity

Neemrana, India
